CONDITION NAME	CATEGORY	ICD-10	DESCRIPTION
Leukemia (AML)	Hematologic Cancer	C92 . 00	Acute myeloid leukemia affecting blood and bone marrow.
Sickle Cell Anemia	Anemia	D57 . 1	Inherited form of anemia causing malformed red blood cells.
Hemophilia A	Coagulation Disorder	D66	Clotting disorder due to factor VIII deficiency.
Iron Deficiency Anemia	Anemia	D50 . 9	Most common form of anemia caused by insufficient iron.
Thrombocytopenia	Platelet Disorder	D69 . 6	Abnormally low platelet count in the blood.
Polycythemia Vera	Hematologic Cancer	D45	Bone marrow disorder causing overproduction of red blood cells.
Multiple Myeloma	Hematologic Cancer	C90 . 0	Cancer of plasma cells that accumulate in bone marrow.
Non-Hodgkin Lymphoma	Lymphoma	C85 . 9	Group of blood cancers affecting the lymphatic system.
Hodgkin Lymphoma	Lymphoma	C81 . 9	Type of lymphoma with Reed-Sternberg cells.
Aplastic Anemia	Bone Marrow Disorder	D61 . 9	Bone marrow failure to produce sufficient blood cells.
Myelodysplastic Syndrome	Bone Marrow Disorder	D46 . 9	Group of cancers where immature blood cells fail to mature.
Hemophilia B	Coagulation Disorder	D67	Clotting disorder caused by factor IX deficiency.
Von Willebrand Disease	Coagulation Disorder	D68 . 0	Most common inherited bleeding disorder.
Thalassemia	Anemia	D56 . 9	Inherited blood disorder with abnormal haemoglobin production.
Chronic Lymphocytic Leukemia	Hematologic Cancer	C91 . 1	Slow-growing cancer originating in lymphocytes.
Systemic Lupus	Autoimmune	M32 . 9	Systemic autoimmune disease affecting multiple organs.
Antiphospholipid Syndrome	Autoimmune	D68 . 61	Immune disorder causing blood clots and pregnancy complications.
Type 2 Diabetes	Metabolic	E11 . 9	Metabolic disorder with insulin resistance.
Hypertension	Metabolic	I10	Persistently elevated blood pressure.
Deep Vein Thrombosis	Coagulation Disorder	I82 . 90	Blood clot forming in a deep vein, usually in the legs.
